The peptide is useful for preparing a composition for treating a disease condition mediated by a human kinase protein e.g. cancer. The present sequence represents the human proto-oncogene tyrosine kinase DNA.

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human gene of the invention encoding a protein that promotes
